

LAYAA

Intelligent Automation for India's SMEs

Layaa AI is an AI automation and enablement firm headquartered in Gurgaon, empowering small and medium enterprises across India to modernise operations through applied artificial intelligence. We bridge the gap between advanced technology and practical business needs, delivering workforce education, strategic consulting, and custom automation development that transforms how organisations operate in the digital age.

Vision & Mission: Democratising AI for SMEs

Our Vision

To advance India's technological progress by enabling SMEs to adopt AI and GenAI in a practical and accessible manner. We believe smaller enterprises deserve the same technological advantages as larger organisations, fostering broad-based innovation and strengthening national competitiveness.

Our Mission

To deliver structured AI education, strategic consulting, and dependable automation solutions that enhance operational capabilities, reduce manual workflows, and support informed decision-making within organisations.

Education First

Building internal AI competence across all business functions

Strategic Guidance

Identifying high-impact automation opportunities aligned with goals

Reliable Automation

Deploying scalable systems integrated with existing infrastructure

Comprehensive Service Verticals

Layaa AI delivers end-to-end AI enablement through five interconnected service verticals, each designed to address specific organisational needs whilst ensuring cohesive adoption across your enterprise.

Education & Workforce Enablement

Structured training programmes building internal AI competence across business functions through on-site and virtual workshops, no-code/low-code automation training, and function-specific sessions for HR, operations, sales, and customer support teams.

Consulting & Process Assessment

Strategic guidance identifying high-impact automation opportunities through comprehensive process mapping, workflow assessment, feasibility evaluation, and development of structured AI adoption roadmaps with prioritised initiatives.

Automation Development & Integration

Custom automation systems tailored to operational requirements, including workflow automations using no-code and custom approaches, AI-powered conversational interfaces, and seamless integration with existing CRMs, databases, and productivity platforms.

Maintenance & Support

Ongoing operational support through subscription-based arrangements, including workflow monitoring, updates, enhancements, issue resolution, and periodic performance assessments ensuring long-term reliability and continued value creation.

Pre-built Automations

Ready-to-deploy automation modules for rapid implementation across common business functions, including resume-screening workflows, lead-processing pipelines, and AI-assisted content generation with configurable logic blocks.

Our Methodology & Technology Framework

Technology & Integration Approach

Our technology framework ensures interoperability, scalability, and operational governance through utilisation of no-code and low-code platforms for accelerated development, custom development for workflows requiring advanced logic, secure API-based connectors for integration with established enterprise tools, and emphasis on monitoring and observability to maintain operational transparency and control.

- No-code/low-code platforms for rapid deployment
- Custom development for specialised requirements
- Secure API integrations with existing systems
- Robust monitoring and governance frameworks

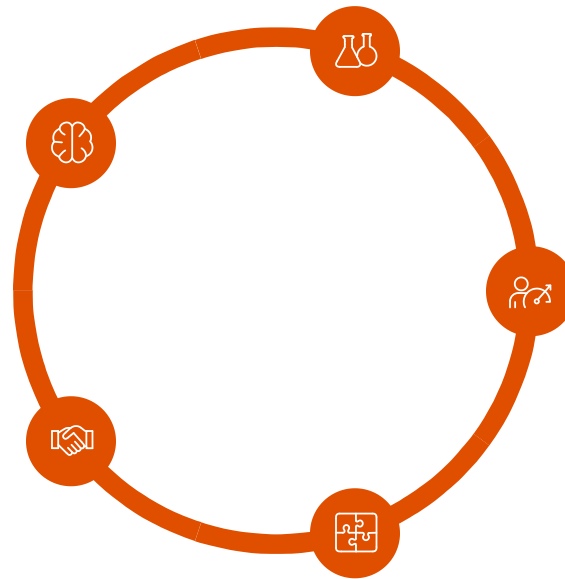

Strategic Direction & Leadership

AI Literacy

Empowering SMEs with enhanced AI literacy and internal capabilities via targeted education.

Ecosystem Partnerships

Forging robust ecosystem partnerships to expand solution reach and accelerate deployment.

R&D Investment

Driving innovation with strategic R&D, building reusable automation and scalable architectures.

Applied Solutions

Delivering powerful applied AI solutions to boost efficiency, refine decision-making, and automate workflows.

Integration Excellence

Ensuring flawless adoption through superior integration frameworks for existing systems.

Leadership
